(MCCCH), Rockville, MD

**Appendix B: Chiller Manufacturer L.C.C.
Calculations**

LCC Cost Calculations (w/o electricity escalation factor):

$LCC = FC + \sum (UC_j + MC_j) / (1+d)^j$, over $j=1$ to N years (life of building=30 years)

where,

FC = first costs

UC_j = plant utility costs for year j

MC_j = relative maintenance costs for year j

d = discount rate, 12% (typically 8-15%)

N = # years of analysis/life of building in years (30)

| Carrier FC = \$353,256 | | | | | |
|------------------------|------------------------------------|-------------|------|--------------------|--------------------------------------|

LCC Cost Calculations (w electricity escalation factor):

$$LCC = FC + PWFe \cdot UC + PWFm \cdot MC$$

where,

$$PWFe = \frac{((1+e')^N - 1)}{e'(1+e')^N}$$

$$e' = \frac{d-e}{1+e}$$

$$PWFm = \frac{((1+m')^N - 1)}{m'(1+m')^N}$$

$$m' = \frac{d-m}{1+m}$$

N = # years of analysis/life of building in years (30)
