Natty Boh Building  
Baltimore , Maryland

## Technical Assignment #1 - Existing Conditions Report

### Executive Summary

The Natty Boh building is an 186,550 SF mixed-use renovation project in Baltimore, Maryland. The building was initially designed to accommodate early shell construction before prospective tenants. The tenants are Canton Self Storage, Countrywide Insurance Co, and Friday's Daycare. These tenants have required specialized spaces such as a lobby, a daycare center, and a conference room.

I used the IESNA Lighting Handbook and AGI32 to analyze the lighting systems for the lobby, daycare center, conference room, and the Natty Boh parking lot. I discovered definite room for improvement in three of the four spaces.
