

Acknowledgements

Much thanks and appreciation to the following people that have given me so much guidance and support over the course of this past year:

UC Santa Barbara for giving me permission to use this building for my thesis.

Angela McDonald and **Jay Wratten** at **HLB Lighting Design, San Francisco** for helping me find such a great project to work on.

Strachan Forgan at **Sasaki Associates** for providing me with all necessary construction documentation and specifications for this project.

ARUP for releasing electrical drawings to me.

Dr. Mistrick and **Professor Ted Dannerth** for their insight on all lighting and electrical aspects of this thesis.

Mr. Phil Hollern at **Renmark USA** for his assistance with energy efficient transformers.

Professor Holland and **Professor Moses Ling** for not only giving me advice on my architectural breadth, but also for their insightful career advice over this past year. I really appreciate it.

Jeff Park for taking time to explain to me the fundamentals of PV design.

Leidy Klotz and **Angela Lewis** for their helpful LEED advice.

My **fellow AEs**, especially to all those in the lighting option for not only keeping me sane this past year but for helping me whenever I had questions. We made it!

My friends for their mentorship and support, especially those who are in **Hong Kong** for keeping me entertained during the many early morning hours that I was awake doing thesis. (Hong Kong is 12 hours ahead of EST.)

Last but not least, **my family** for their patience and support these past 5 years even though I am on the other side of the world most the year. I am most grateful.
