LUTRON COMMENTS

Sandra

- Trouble visualizing some spaces – 2D visuals worked well, need more 3D visuals

- Sketches a little difficult to read/too dark

- Larger text font and better contrast

- Better to have a sketch/rendering than showing an image from another project that is not so accurate

- Site: Elaborate – how are the columns lit? Should have rendered the sconce

- Auditorium – just downlights or something else?

Mike

- Site

  o path lights too bright – think of movement patterns, hierarchy of movement

  o columns behind illuminated glass – silhouetted – is this bad?

  o Control movement with light

- Atrium

  o Are the coves sufficient to articulate edges, reinforce concept of the body?

  o Explain more

- Auditorium

  o Luminous panels break up the ceiling too much – supposed to be like skylights?

- Lab

  o Space within a space is a good idea

  o Good job breaking it up
