depth

BLAST AND PROGRESSIVE COLLAPSE ANALYSIS

to incorporate blast and collapse resistant design to mitigate catastrophic scenarios in the event of a terrorist attack

HIROKI OTA		AE 482	01	TOPICS	05	CONCLUSION	A	blast	E	direct
monongalia general hospital Last update 12 APR. 2009 Copyright © Hiroki Ota 2009			02	CONDITIONS	06		B	collapse	F	
			03	DEPTH	07		C	design	G	
presentation ver. 2.0	architectural engineering department		04	BREADTH	08		D	indirect	H	

depth

BLAST ANALYSIS

blast loads are directly proportional to the stress wave propagation resulting in a dynamic loading situation on the structure

open-air and confined blast

building is engulfed by the shockwave, creates complex loading pattern around the structure

HIROKI OTA		AE 482	01 TOPICS	05 CONCLUSION	A blast	E direct
monongalia general hospital Last update 12 APR. 2009 Copyright © Hiroki Ota 2009			02 CONDITIONS	06	B collapse	F
			03 DEPTH	07	C design	G
presentation ver. 2.0	architectural engineering department		04 BREADTH	08	D indirect	H

depth

BLAST ANALYSIS

confined blasts are extremely hard to analyze – fluid dynamics and solid dynamics

blast is assumed to have eliminated a column

open-air blast will be analyzed in the breadth section

HIROKI OTA	AE 482	01 TOPICS	05 CONCLUSION	A blast	E direct
monongalia general hospital Last update 12 APR. 2009 Copyright © Hiroki Ota 2009		02 CONDITIONS	06	B collapse	F
		03 DEPTH	07	C design	G
		04 BREADTH	08	D indirect	H
presentation ver. 2.0	architectural engineering department				

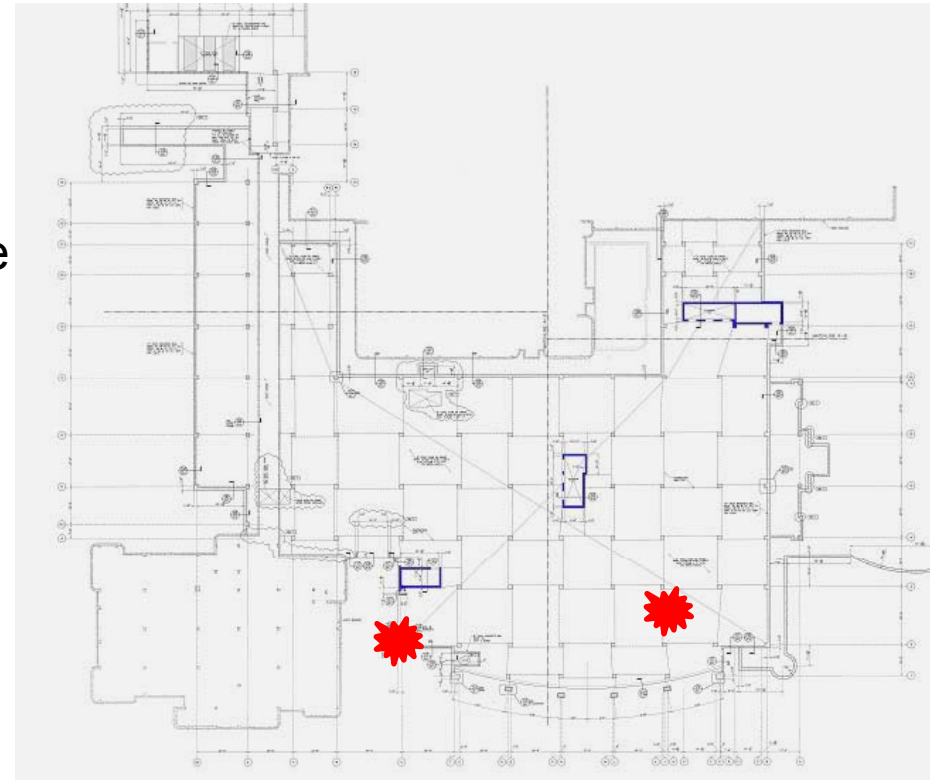

depth

PROGRESSIVE COLLAPSE ANALYSIS

collapse is caused by “the spread of an initial local failure from element to element, eventually resulting in the collapse of an entire structure or a disproportionately large part of it.”

blast is assumed to have eliminated a column, triggering a collapse scenario

HIROKI OTA	AE 482	01 TOPICS	05 CONCLUSION	A blast	E direct
monongalia general hospital Last update 12 APR. 2009 Copyright © Hiroki Ota 2009		02 CONDITIONS	06	B collapse	F
		03 DEPTH	07	C design	G
presentation ver. 2.0	architectural engineering department	04 BREADTH	08	D indirect	H

depth DESIGN

assumed to be a medium level of protection building

two methods used for design

- indirect design method
- direct design method, alternate path

indirect design to determine required steel reinforcement

direct design to determine new floor design

designs compared for effectiveness (also discussed in breadth)

HIROKI OTA		AE 482	01	TOPICS	05	CONCLUSION	A	blast	E	direct
monongalia general hospital Last update 12 APR. 2009 Copyright © Hiroki Ota 2009			02	CONDITIONS	06		B	collapse	F	
			03	DEPTH	07		C	design	G

conclusion

RECOMMENDATIONS

the existing structural system is more than adequate to mitigate a collapse situation

1 lite, fully tempered curtain wall will provide better thermal properties for the building as well as resist a 400 lb charge

the analysis and design conducted in this thesis is not meant to save the structure but to save lives, other precautionary measures must be taken
