West Expansion

Building Name: Confidential – West Fuala Expansion

Location: Confidential – Harrisburg, PA

Gross Building Area: 350,545 SF

Number of Stories: 1/2 Basement + First floor + Mezzanine

Building Type: Food processing and packaging plant

Contractor: Turner Construction Company

Project Delivery Method: Design-Bid-Build

GMP contract: \$83 Million

Construction Dates: June 2010 – February 2012

Plant before the expansion

WEST FUALA PLANT EXPANSION

PROJECT BACKGROUND

JAAFAR AL AIDAROOS | CONSTRUCTION MANAGEMENT
PENN STATE AE SENIOR CAPSTONE PROJECT
ADVISOR: DR. CHIMAY ANUMBA

PRESENTATION OUTLINE:

- VI. LESSONS LEARNED
- VII. ACKNOWLEDGEMENTS

West Expansion

Structural System

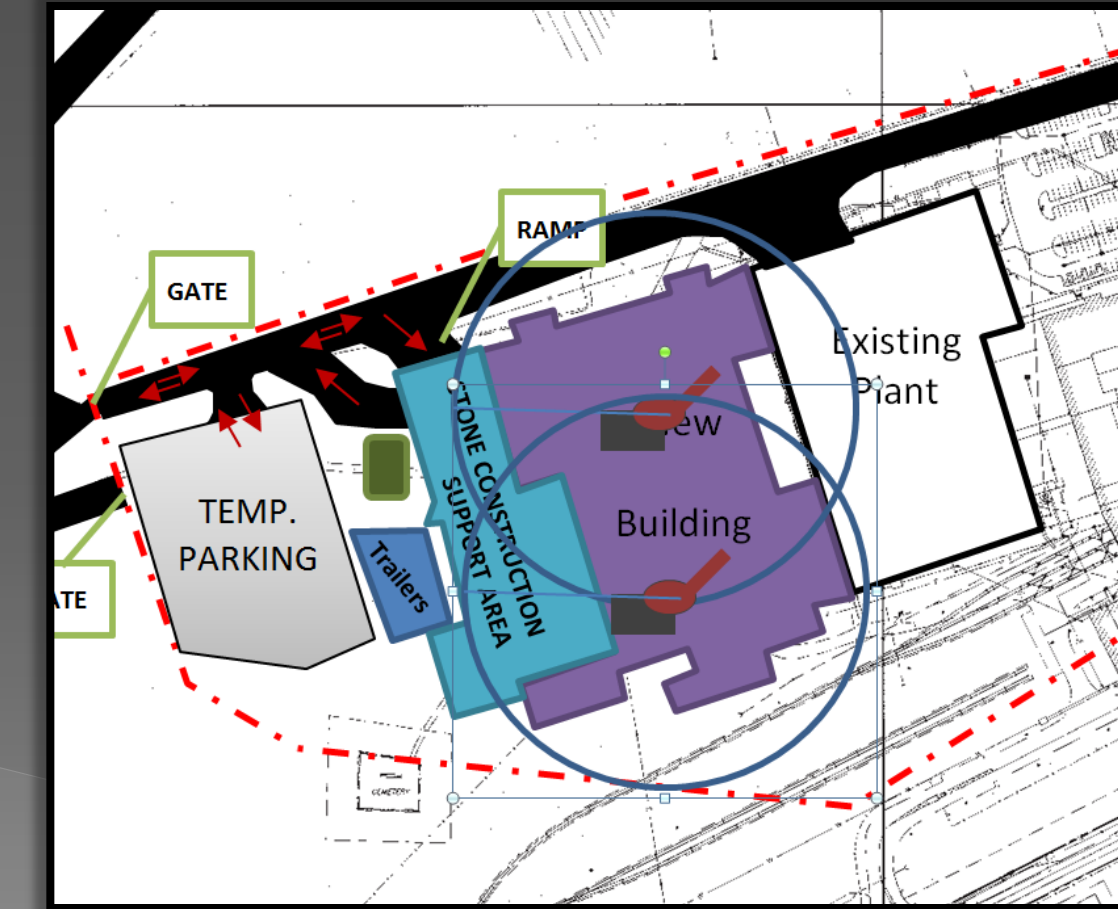

- **First Floor:** Precast concrete
- **Mezzanine:** Steel
- **Area O:** CMU walls

Lighting System

- 650 Volt-Amperes

Construction Phases

- Mobilization
- Sitework
- Foundation
- Erection of Envelope
- Building Water-tight and fitouts

Erection of Envelope Phase

WEST FUALA PLANT EXPANSION

PROJECT BACKGROUND

JAAFAR AL AIDAROOS | CONSTRUCTION MANAGEMENT

PENN STATE AE SENIOR CAPSTONE PROJECT

ADVISOR: DR. CHIMAY ANUMBA

PRESENTATION OUTLINE:

- II. ANALYSIS #1: Energy Analysis
- III. ANALYSIS #2: Photovoltaic Array
- IV. ANALYSIS #3: Structural Modification
- V. ANALYSIS #4: Bathroom Prefabrication
- VI. LESSONS LEARNED
- VII. ACKNOWLEDGEMENTS

Issue

- **100 Years**
- Energy issue - High energy demand
- Many Structural trades
- Congestion in Area O

Thesis Proposal

- Energy Analysis
- Photovoltaic Panels
 - Breadth
- Structure modification to Precast Concrete Mezzanine
 - Breadth
- Precast Prefabrication of Bathroom walls in Area O

Type of Analysis

- Promote a better long term sustainable design
- Generate Sustainable Energy
- Modify Structure
- Utilizing prefabrication to reduce congestions

WEST FUALA PLANT EXPANSION

Energy Analysis

- Produces an Energy model
- Used throughout design stage to assess the effect of design changes on the energy usage

Tools

- AutoDesk - Project Vasari
- BIM Model

Energy model

1. Create or import building model
2. Import parameters
3. Run Energy model Analysis
4. Analyze BIM model

Parameters:

- Manufacturing
- Harrisburg, PA
- 24/7 facility
- One HVAC system

WEST FUALA PLANT EXPANSION

Information produced:

- Building performance Factor
- Energy Use intensity
- Life Cycle Energy Use
- Renewable Energy Potential
- Emissions
- Annual Energy Use
- Et cetera

Energy Model Report

Building Performance Factors

Location:	Hershey, PA, USA
Weather Station:	53158
Outdoor Temperature:	Max: 82°F/Min: -10°F
Floor Area:	140,337 sf
Exterior Wall Area:	127,669 sf
Average Lighting Power:	1.30 W / ft ²
People:	326 people
Exterior Window Ratio:	0.20
Electrical Cost:	\$0.09 / kWh
Fuel Cost:	\$1.03 / Therm

Renewable Energy Potential

Roof Mounted PV System (Low efficiency):	789,717 kWh / yr
Roof Mounted PV System (Medium efficiency):	1,579,434 kWh / yr
Roof Mounted PV System (High efficiency):	2,369,151 kWh / yr
Single 15' Wind Turbine Potential:	2,969 kWh / yr

*PV efficiencies are assumed to be 5%, 10% and 15% for low, medium and high efficiency systems

Energy Analysis

Conclusion:

- Does not affect schedule
- No cost
- A more sustainable long-term design
- High possibility of cost reduction
- Up to 25% of Energy requirements at day through lighting concepts

Recommendation:

- Project Team utilize this tool to enhance and produce a more sustainable design in the long run

Beams	4.3 klf
Flat Slab	275 psf
Self Weight	

Breadth Work

Precast Concrete Column Design

12"x12" HSS → 20" x 20" Precast Concrete

The Column will have to have the following properties:

$f'c$ (ksi) = 4

Fy (ksi) = 60

Tie = Rectangular Tie

8 No. 18 (US)

3 Bars in 20 in line

AS = 32 sq.in

Steel ratio = 0.08

Loads = 1730 kips

Summary of loads

Column Designed can carry = 1730 kips

Required Load to be Carried = 1577 Kips

Column Design can Carry intended Load!

1730 kips > 1577 kips

Precast Concrete Bathroom prefabrication

Assumptions for proposed precast walls:

The same methods used for the current precast concrete envelope would be used for the precast bathroom walls:

- Procurement
- Prefabrication
- Transportation
- Hoisting
- Connecting

Bathroom Finishings:

- Toilet Paper Dispenser
- Paper Towel Dispenser
- Sanitary Napkin Disposal
- 24"x26" mirror
- Soap dispenser

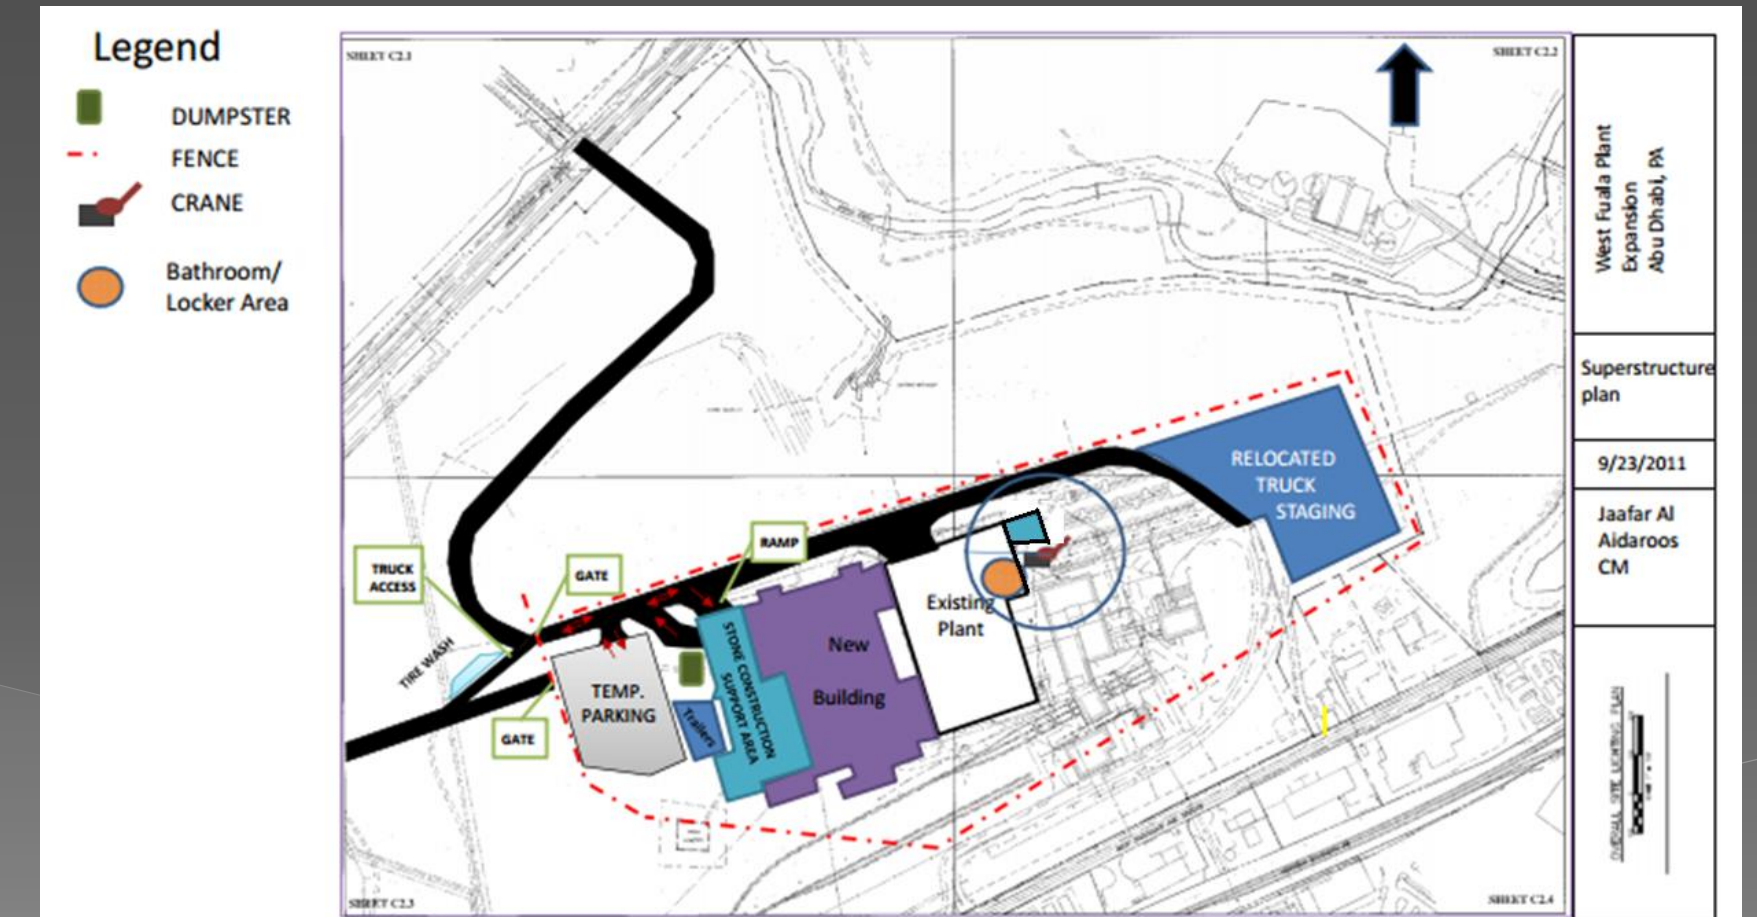

On-Site Prefabrication

Walls and finishes assembled at site and then hoisted into place

Current Schedule

Critical Path task

Task	Early Start	Early Finish
Install Masonry Walls	22 Jun	07 Sept
In-Wall plumbing	24 Jun	19 July
In-Wall Electric Rough-in	27 Jun	07 Sept
HVAC Main Duct Work	01 July	07 Sept
Plumbing Insulation	06 July	07 Sept
Piping and ductwork connections	25 July	07 Sept

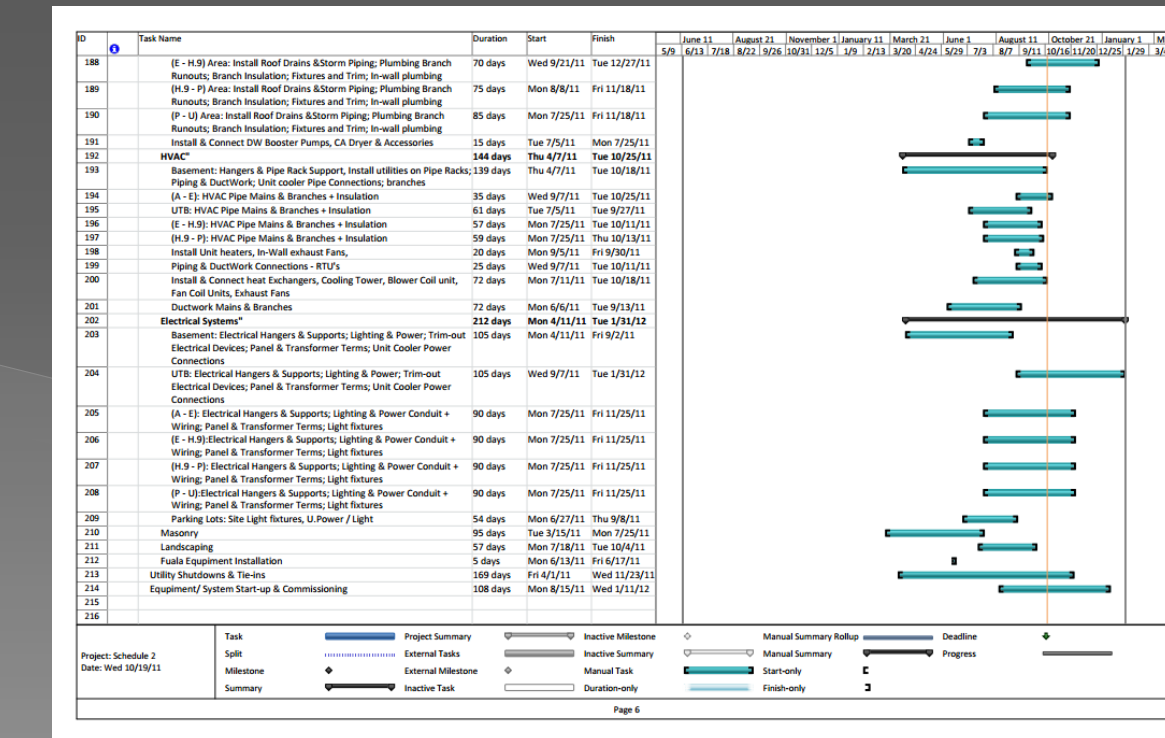

Schedule impact:

Current Duration: 45 days of construction for CMU walls

Using RS Means & actual Project Schedule
Proposed system Duration:
2 days for hoisting precast walls

General Conditions Impact

GC Calculated to be \$992,000 over 22 Months
Around 43 Days of Project Schedule Saving = \$67,500 of GC Savings

 - II. On-site prefabrication & Assembly
 - III. Logistics, Hoisting, Connecting
 - IV. Schedule & GC impact
 - V. Recommendation
- VI. LESSONS LEARNED
- VII. ACKNOWLEDGEMENTS

Final Conclusion of prefabrication

- 43 Days of Schedule Reduction
- \$62.5K Worth of GC Savings
- Major Reduction in site congestions
- Increased Safety, Quality
- Less Waste

Recommendation

- Pursue Prefabrication of Bathrooms in Area O
- Met goals of reducing site congestions

WEST FUALA PLANT EXPANSION

LESSONS LEARNED

- III. ANALYSIS #2: Photovoltaic Array
- IV. ANALYSIS #3: Structural Modification
- V. ANALYSIS #4: Bathroom
- VI. LESSONS LEARNED**
- VII. ACKNOWLEDGEMENTS

Lessons learned

Analysis 1: Energy Model

No cost to produce a design with less energy usage

Analysis 2: Photovoltaic Panels

Sustainable Energy with a 7 year payback period

Analysis 3: Structure modification

Reduction in Schedule and Cost

Analysis 4: Bathroom prefabrication

Many Advantages: reduced Congestion, schedule, safety, quality

Electric Loads & Layout

Summary of Calculations

System Covers 20% of the lighting system
Annual Savings of \$29,591 on Electric Bill

Power Factor = 1.0 of Lighting system
134 kW / 650 kW = 20.615%

PHOTOVOLTAICS

Photovoltaic Panels

System Cost per Watt:

Cost of Astronergy System= \$1.97 per DC watt
Gross Cost of installation = \$5 per DC watt (*U.S. Dept of Energy*)

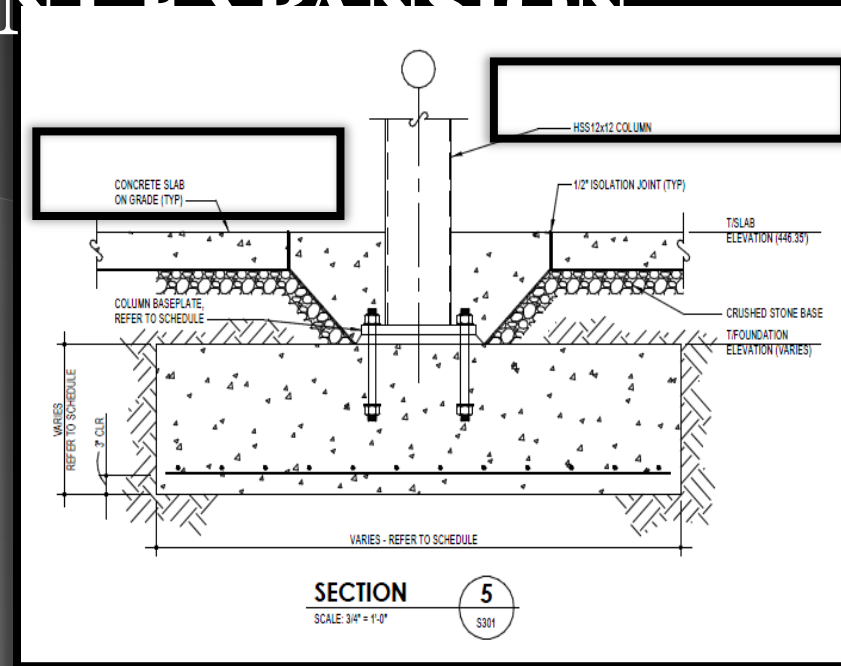

Table 8.8.2:	Description	Monetary Values (\$)	COST
Estimated System Cost	Assumed Installation Gross Cost		\$8,771,723
FINANCIAL INCENTIVES	Pennsylvania SREC Market	\$ 3,129,987	
	PA State SunShine Rebate	\$ 52,500	
	Federal Tax Credit	\$ 2,631,517	
TOTAL SAVINGS		(\$ 2,957,719)	
ESTIMATED NET COST AT INSTALLATION:			\$ 6,087,706

WEST FLA PLANT EXPANSION

Changing the Structure of the Mezzanine Assumptions and parameters

- Process equipment penetration were not known, so structure was switched to steel to prevent delay
- There is enough space for minor design modification
- Typical Bay method fro calculations
- Maintain original design of mezzanine

TYPICAL PRECAST GIRDER CONNECTION DETAIL
SCALE: NONE

System	Cost of erecting a typical bay	Cost per sqft	(32,251 SF)	Duration
Precast Concrete	\$71,760	\$70.10	\$ 2,260,795.10	35 Days
Steel	\$99,986	\$97.64	\$ 3,148,987.64	32.5 Days

Typical Bay	Description	Cost (\$)	No. units	Total Cost	Loads
Girders	HSS 32" x 24" x 5/8"	310 /ft.	2	\$19,840	17.62 klf
	2'-0" wide x 3'-6" deep	185 /ft.		\$11,840	42.56 klf
Beams	HSS 20" x 12" x 1/2"	201 /ft.	7	\$45,024	2.8 klf
	1'-0" wide x 2'-0" deep	160 /ft.		\$35,840	4.3 klf
Slabs	CIP concrete	25 /sqft	1	\$25,600	90 psf
	Precast slab	20 /sqft		\$20,480	275 psf
Columns	HSS 12" x 12" x 3/8"	259 /ft.	1	\$9,522	607 kips
	Precast Concrete 20" x 20"	200 /ft.		\$3,600	1577 kips

WEST FUALA PLANT EXPANSION

Breadth Work

Precast Concrete Column Design

12"x12" HSS

20" x 20" Precast Concrete

The Column will have to have the following properties:

$$AS = 32 \text{ sq.in}$$

$$\text{Steel ratio} = 0.08$$

$$f'c \text{ (ksi)} = 4 \times 0.92 = 3.68$$

$$Fy \text{ (ksi)} = 60 \times 0.08 = 4.8$$

$$\text{Total} = 8.48 \times 17 \text{ ft} \times 12\text{in/ft} = 1729.92 \text{ kips}$$

•Contingency pipes should be cast in structural Slabs as an outlet pipe for seepage

•Electrical service shall also be connected to the main switch

•Gap in the between bathroom and structural slab will be packed with non-shrink grout around perimeters
