

Barbara Horton

- Elevation and Plan renderings are good
- Well presented
- Lobby rendering a little confusing with lower and upper wall
- Too much text on design goal slide
- Black-Box theater – reduce area of light on the stairs
 - add another layer of light to give another dimension to the ceiling
- Research Cluster – 50' line of fixtures not realistic
 - add in “tech” feeling to add sparkle to the space (maybe jelly jars?)
 - good rendering
- Trees and uplights will create light trespass which was mentioned as “not wanted”
- Glow from with-in the building – great idea
- Maintenance issues with tunnel lights – how to change bulbs and avoid
- Consider LED or fiber-optic – not changed often

Lee Waldron

- Very good presentation – well thought out
- Tunnel – maintenance: glass is easier than acrylic
- Continuity to color through windows to tunnel
- Black-Box – material on stairs embedded with fiberoptics into the carpet?
 - ceiling with tension grid and light shining from above it
- Office Space - transform space with new schemes
 - Light shelf doesn't really payback
 - Luminous ceiling would minimize contrast and increase daylight feel

Carrie

- liked goals, concepts, solutions
- realistic daylight and neat tunnel
- consider another approach to uplighting trees without light trespass
- lobby space rendering confusing with tunnel light
- Theater space is a tough space to light
